What's New in Simply Accounting 2010

The following are new features included in Simply Accounting 2010:

Streamlined Installation Wizard

Simply Accounting has simplified the installation wizard by reducing the number of steps in the installation process. The wizard also provides more guidance to help you through the installation process, including notes about how to install the software on systems that use a firewall.

Improved Sales and Purchases Windows

The re-designed Sales and Purchases windows are more user-friendly, and allow you to enter information more quickly and efficiently.

Easier Access to Balances and Totals From the Latest Transaction Date

By default, total sums and balances on the Home Window are now calculated using the latest transaction date. You can still display balances by session date if you select **Calculate Record Balances in Home Window Lists by Session Date** as a user preference.

New Simply Accounting Troubleshooting Tool

The new Simply Accounting Troubleshooter helps you understand and recover from common Connection Manager issues. To access the Simply Accounting Troubleshooter, on your desktop, open the **Start** menu and select **Simply Accounting Troubleshooter** from the Simply Accounting program group.

Note: The Simply Accounting Troubleshooter is not available on Linux.

Preparing ROE Forms for Web Submission (SimplyCARE with Payroll Only)

You can now create a bulk ROE file in Simply Accounting which allows you to prepare more than one ROE form and submit them to the ROE Web site in a single draft file. You can review, modify, and print these ROE forms before they are submitted to the Canada Revenue Agency.

For those who are not familiar with how to complete the ROE forms, Simply Accounting provides the appropriate help with each field in the form.

Faster Start-Up Times

The time it takes to open company files in Simply Accounting is now shorter.

Additional Enhancements in Simply Accounting Enterprise

Improved Inventory Management

The following changes were made to improve how inventory is managed in Simply Accounting Enterprise:

- **Simplified removal of inventory items** Remove items from your inventory without clearing the tracking data for all items. This means you can still look up past transactions that use these removed items. Inventory items with a zero quantity and value can now be deleted in one easy step.
- **Control who removes inventory** Simply Accounting has added new inventory user permissions to safeguard your data when using the new inventory removing feature.
- **Faster reporting** Simply Accounting Enterprise has improved the speed at which inventory reports are generated. With the increased reporting speed, you can generate reports as often as you wish without having to wait for a long time.

Faster Transaction Posting in Multi-User Mode

To speed up data entry, transactions go through a verification process. If any errors or conflicts are detected, you will be notified and then allowed to fix the issue in the Unprocessed Transactions window before re-posting the transaction.
